

[E] LIQUID_eKYC_014_RegisterKYCResultAPI_v1.4.2

Revision history

- 2019/08/09 v1.0 Created
- 2020/04/22 v1.1 Update format of API Document
- 2020/07/06 v1.2
 - Added a line on auto-masked images for "Has sensitive info"
 - Removed the section on request timing since the timings can differ
- 2020/07/06 v1.3 Organized Overview and Specification. Removed the redundant sections
- 2020/12/02 v1.4
 - Added features for individual number document collection
 - Changed value type descriptions from Japanese to English
- 2021/08/05 v1.4.1 Added General Document Application and Public Certification, reorganized My Number Collection features
- 2021/11/17 v1.4.2 Added information about restrictions

Overview

- Allows organizations to register KYC results when not using Manager.

Specification

- Register a KYC result to the latest KYC application represented by designated Applicant ID
- The KYC status is changed to "Completed" when the API's request succeeds
- When the newest application of the designated Applicant ID contains sensitive information, organizations can specify this in the API request. This will activate the auto-masking of images in LIQUID eKYC
- If the request was sent to an Applicant ID that does not belong to KYC Application, will return "Applicant ID is not found" (CE00001)

Restrictions

- Max 100 requests/minute
- The masking is done through a batch process that runs every 5 minutes. If you want to retrieve the masked images, execute 010_GetPhotosAPI 5 minutes or more after registering the KYC result. One of the return values of 010_GetPhotosAPI indicates whether an image is masked, so you can additionally run several retries according to its value
- Immediate modifications to the database may not be reflected, so the response may include old data or the request might result in an error. In this case please repeat the request after an interval
- For SDK
 - Calling this API immediately after 016_RegisterApplicationInfoAPI may result in an error. Make sure to call after a 1 second interval with several retries
- For Web (pre-application)
 - Calling thi API immediately after the application is completed with eKYC Applicant may result in an error. Make sure to call after a 1 second interval with several retries
- For Web (post-application)
 - Calling this API immediately after 016_RegisterApplicationInfoAPI may result in an error. Make sure to call after a 1 second interval with several retries

Error cases

- Applicant ID is not found (CE00001)
- Newest application of designated Applicant ID, is still not completed yet, or is expired (CE00005)
- Newest application of designated Applicant ID, is completed and KYC result is already registered (CE00006)
- KYC operation is in progress (CE00009)
- System Error

API Specification

- URL
 - Staging: [https://\(Unique URL for each organization\)/v1/kyc_results](https://(Unique URL for each organization)/v1/kyc_results)
 - Production: [https://\(Unique URL for each organization\)/v1/kyc_results](https://(Unique URL for each organization)/v1/kyc_results)
- Protocol: https
- Method: POST
- Request: JSON
- Response: JSON

Request detail

HTTP header

	論理名 (Logical Name)	物理名 (Physical Name)	JSONデータ型 (JSON Data Type)	データ属性 (Value Type)	文字数上限 (Char. Limit)	必須 (Req?)	フォーマット (Format)	説明 (Description)
1	API Key	Refer to Common Spec.				○	Refer to Common Spec.	

Body

論理名 (Logical Name)	物理名 (Physical)	JSONデータ型 (JSON Data Type)	データ属性 (Value Type)	文字数上限 (Char. Limit)	必須 (Req?)	フォーマット (Format)	説明 (Description)
-----------------------	-------------------	------------------------------	-----------------------	------------------------	--------------	--------------------	---------------------

		Name)		(Format)			
1	Applicant ID	Refer to Common Spec.				○	Refer to Common Spec.
2	KYC result	kyc_result	string	Number	1	○	- Result of KYC << Please refer to "APIGenericCode" >> - Result of KYC operation done in out of eKYC Manager (basically done at your end) - The result reflect only the operation of check validity of uploaded ID document and applicant. And so it does not affected by credit check, antisocial forces check, or black list check etc. - If "OK", credit check, antisocial forces check, or black list check etc. will be run by your end, and account will be opened. - If "NG", assuming that you will tell applicant to re-apply.
3	Has sensitive info	has_sensitive_info	bool	true/false		○	- Indicates whether the data contains sensitive information. - false: no sensitive info, true: there is sensitive info - Auto-masking is done if there is sentive information. - Set to false for KYC (Comply to "He") - Set to false when using Public Certification Service for Individuals
